FIELD REPORT

Looking Good, Feeling Good

Mark Meyrose has been doing a heck of a job rolling the field. The ground is smooth for even some of the smaller wheels to take off successfully. He is also trying to expand some of the runway to the West. It is not ready to land in (so don't try that), but it is being cut low ... low enough to get a good final approach from the West.

A Beaver (below) was spotted at the field, but it wasn't building a dam ... it was flying!

RADIO CONTROL IN THE NEWS

Drone Deliveries Are Coming

These you can call drones ... The first FAA-approved delivery drones are coming to the United States. The FAA will allow collaboration between NASA, Flirtey, and Virginia Tech to fly unmanned aircraft to deliver pharmaceuticals to an underserved community in West Virginia. The organizations will use fixed wing and hexacopter craft to deliver up to 10 lbs of medicine up to 10 miles away.

Flirtey considers itself the world's first commercial drone delivery service. It began testing in 2013 in Australia, delivering over 100 textbooks as well as humanitarian aid in New Zealand.

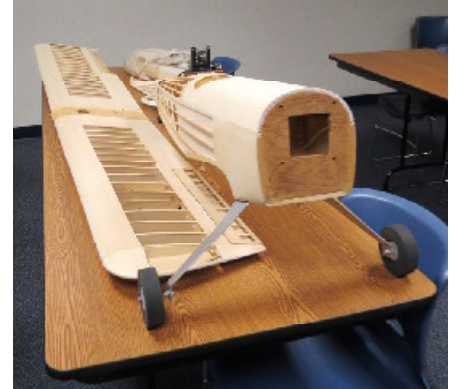

What does this mean for us? It is my opinion that this is a good thing. It shows the FAA is being reasonable to allow unmanned craft to operate in the airspace. It would seem that hobby enthusiast use of model aircraft will remain in the good graces of the FAA.

SHOW & TELL

Big and Small

Jim Myszewski

brought in a LARGE scratch-built low-wing plane that he acquired to sell. With engine included, this was a heck of a deal and the work done so far was excellent. That one-piece wing barely fit in the picture!

**Mike McCullough**

brought in a foamy PT-17 UMX model. This is about one of the smallest RC planes being made, but has big-scale looks.

AROUND THE AREA

Upcoming Events

June 27
The Flying Electrons
Airfest 2015
Menomonee Falls, WI
