**Proposed Rules Change**

## #21, Use of Frequency Board

It was mentioned in the last meeting that since we no longer have a 72MHz frequency board to put your badges on, we need to change Field Rule #21 from:

Do not turn on a non-spread spectrum transmitter until your AMA or other identification card is clipped to the frequency control board.

To:

Do not turn on a non-spread spectrum transmitter until your frequency flag specifying your current frequency is clipped to the end of your antenna.

The best way to identify your 72MHz (or other older style transmitter band) is to have your frequency numbers clipped to your antenna. The odds of 1 or more members using a 72MHz transmitter these days is slim but its still nice to have it covered in the rules. We will vote on this change at the next meeting.

**Save the Date:**

## Special Use

## MSOE Students DIY Plane

This month the MSOE students asked to use our field for a test flight of their custom built airframe. This typically happens every Spring and sometimes the objective of the class is to lift a heavy payload or just create an airframe of their own. Here's some pictures of the event provided by **Tim Sorensen**.
